**ADM Citric Acid Products and Regulation (EC) No. 1829/2003
on Genetically Modified Food and Feed**

To Whom It May Concern:

The starch-based fermentation feedstock used to make our Citric products, including Citric Acid Anhydrous, USP/FCC, Sodium Citrate Dihydrate, USP/FCC, Sodium Citrate Anhydrous, USP/FCC, and Potassium Citrate, USP/FCC is made from non-segregated corn (maize), which therefore may contain material from genetically modified crops. However, tests on these products using Polymerase Chain Reaction and HPLC saccharide analysis have to date all tested negative for both genetically modified material and residue of the original feedstock. In addition, these products are produced by a conventional micro-organism. Food additives produced by conventional micro-organisms are considered not to fall within the scope of Regulation 1829/2003¹.

Sincerely,
ADM Technical Services
